TITLE OF INVENTION: jannaschii
FILE REFERENCE: PB275
TITLE OF INVENTION NUMBER: US/08/916,421B
CURRENT APPLICATION NUMBER: US 60/024,428
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR PILING DATE: 1996-08-22
NUMBER OF SEQ ID NOS: 3
SOFTWARE: Patentin version 3.1
SEQ ID NO: 1
SEQ ID NO: 1
SEQ ID NO: 1
SEQ ID NO: 1
SEQ ID NO: 3
SOFTWARE: LENGTH: 1664976
TYPE: DAA
ORGANISM: Methanococcus jannaschii
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Trie OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PREUDOMONAS

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PREUGINGA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: 107196,136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,768

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 882
GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Genes were identified by a combination of several methods: Gene prediction programs including Genscan+ (Chris Burge, http://ccr.001.mit.edu/GENSCAN.html), GeneMarkHWM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant http://www.igt.org/softlab/glimmerm.html, and GeneSplicer (Mihaela Pertea, mprediction cagainst a peptide database and the plant EST database at TIGR mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by ERNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE) inclinis. Genes encoding tRNAs are predicted by http://ftp.genome.washington.edu/RM/Repeatmasker (Arian Smit, http://tp.genome.washington.edu/RM/Repeatmasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oin(57. 242,335. 747)

On May 13, 2003 this sequence version replaced gl:23118058.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each conting described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffout'). Within each contig-acaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both and sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

NOTE: This sequence may represent more than one clone.
NOTE: This is a "working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and thair order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Muzny, D. On Nov 19, 2002 this sequence version replaced gi:23911491.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads; assembled using Atlas (http://www.hgsc.bm.tmc.edu/projects/raft/). Each contig described in the feature table below represents; a scaffold in the Atlas ssembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and ordered and separated by sized gaps filled with Ns to the Setimated, and separated by sized gaps filled with Ns to the Setimated say be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table. Submitted (26-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 282156)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                            NOTE: Bstimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
NOTE: This sequence may represent more than one clone.
NOTE: This is a "working draft' sequence. It currently
consists of 5 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.

Claim 144; SEQ ID NO 3729; 577pp + Sequence Listing; English

invention relates to identifying a stress condition to which a plant. It has been exposed, comprising:

contacting nucleic acid representative of expressed polynucleotides the plant cell with an array or probes representative of the plant

Cell genome; and the state of expressed polynuclectures in the plant cell genome; and profile of expressed polynuclectures in the plant cell production of transgence presents. The method is useful in the plants production of transgence plants, cells and seeds and in producting plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thalians stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.

SSE1 encodes a protein (see AAB19718) that, when expressed in a cell of a plant, modifies or alters the production of a food storage reserve material (e.g. protein, lipid or carbohydrate storage reserve), facilitates the intracellular transport of a storage protein, or facilitates the formation of protein or oil bodies. The invention provides a transgenic plant (or plant cell, plant tissue, plant organ or plant component) which includes a recombinant SSE1 transgene that modifies the production of food storage reserves, thereby
                                                                       storage reserve; storage protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1483 BP; 461 A; 268 C; 347 G; 407 T; 0 other;

directly or indirectly the insulin receptor or insulin receptor signalling pathway in the manufacture of a medicament for preventing or treating cephalic pain. Also described is an isolated polymorbecide (II) or protein (III) comprising a polymorphism that causes susceptibility to cephalic pain, or a naturally occurring polymorphism that is in linkage disequilibrium with the first polymorphism (I) has antimigraine and vulnerary activities. (I) is useful for treating cephalic pain which may be a cluster headache, chronic paroxysmal hemicrania, headache associated with vascular disorders, headache associated with substances or their withdrawal (for example drug withdrawal), tension headache and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ly or indirectly insuling receptor or

Polymorphisms in the insulin receptor gene have been found to cause susceptibility to cephalic pain, particularly to migraine. The method comprises typing a region of the insulin receptor gene or insulin receptor protein of an individual. A susceptibility to cephalic pain may be diagnosed using a probe, primer or antibody which is capable of detecting a polymorphism in an insulin receptor gene region or the insulin receptor protein. The present sequence corresponds to a polymorphic site and flanking sequences of a single nucleotide polymorphism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

```
The present sequence is provided in a specification relating to a method for diagnosing susceptibility to cephalic pain in an individual. The method comprises typing in vivo or in a sample from the individual, the insulin receptor gene region or insulin receptor individual, the insulin receptor gene region or insulin receptor cause susceptibility to cephalic pain have been found. Susceptible to cause susceptibility to cephalic pain have been found. Susceptibility may be diagnosed using a probe, primer or antibody which is capable of detecting an insulin receptor gene region or insulin receptor protein polymorphism. The method is useful for diagnosing susceptibility to migraine, cluster headache, chronic paroxysmal hemicrania, headache associated with vascular disorders, headache associated with substances or their withdrawal, tendion headache, and so on. It is useful for assessing the efficacy of agents in relieving cephalic pain, and can be used to assess the ability of agents to modulate insulin and can be used to assess the education and/or susceptibility of an individual to the development of new drug therapies which selectively target one or more allelic variants of the insulin receptor and in the allelic variants of the insulin receptor and in the allelic variants of the insulin receptor and in the prelent parameter of the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing susceptibility to cephalic pain such as migraine by typing insulin receptor gene or protein in vivo, or in a biological sample and determining individual's susceptibility to cephalic pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               corresponds to a polymorphic site and flanking sequences of a sin
nucleotide polymorphism (SNP) in the human insulin receptor gene

The present invention relates to the use of an agent that modulates directly or indirectly the insulin receptor or insulin receptor signalling pathway in the manufacture of a medicament for preventing or treating cephalic pain. Cephalic pain disorders are generally multifunctional disorder, with a cluster of headache, chronic paroxysmal hemicrania, headache associated with vascular disorders, paroxysmal hemicrania, headache and in particular migraine with aura or migraine without aura. The treatment of cephalic pain and migraine or migraine without aura. The treatment of cephalic pain and migraine pathways, in particular by manipulation of the glucose and lipid metabolism pathways, in particular by manipulation of the insulin receptor. Insulin receptor is an important component in the regulation of the glucose and lipid metabolism pathways. Single nucleotide polymorphisms (SIP) in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of agent that modulates directly or indirectly insulin receptor insulin receptor signaling pathway in manufacture of medicament for preventing or treating cephalic pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ulin receptor ĝene contribute to susceptibility to cephalic pain.
present sequence is INSBa polymorphism of human insulin receptor
Human; insulin receptor; cephalic pain; therapy; headache; chronic paroxysmal hemicrania; vascular disorder; tension headache; migraine; single nucleotide polymorphism; SNP; ds.

                                                                                                                                                                                                                                                                                                                                                                             he invention relates to a novel method for diagnosing diabetes or susceptibility to diabetes in an individual. The method of the invention has antidiabetic activity. The method is useful for diagnosing diabetes or susceptibility to diabetes in an individual. Other methods of the invention are is useful for treating diabetes and for treating and
                                                                                                                                                                                                                                                                                                                                                                                                                                                   present sequence contains a single nucleotide

The present invention describes the use of an agent (I) that modulates directly or indirectly the insulin receptor or insulin receptor treathed is an edicament for preventing signalling pathway in the manufacture of a medicament for preventing treating cephalic pain. Also described is an isolated polymochotide (II) or a naturally occurring polymorphism that causes susceptibility to ephalic pain, or a naturally occurring polymorphism that is in linkage disequilibrium with the first polymorphism. (I) has antimigraine and be a cluster headache. Chronic paroxysmal hemicrania, headache associated with vascular disorders, headache associated with substances or their withdrawal (for example drug withdrawal), tension headache and in particular migraine with or without aura. The present sequence represents exons 14-17 from the insulin receptor gene including introns, which is used in the exemplification of the present invention.
                                                                                                  Use of agent that modulates directly or indirectly insulin receptor or insulin receptor signaling pathway in the manufacture of medicament for preventing or treating cephalic pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Diagnosis of susceptibility to migraine in individuals comprises the identification of polymorphisms in the insulin receptor gene region

Disclosure, Page 38-41; 41pp; English

The present sequence is provided in a specification relating to a method of diagnosing susceptibility to cephalic pain. Polymorphisms

```
The present sequence is provided in a specification relating to a method for diagnosing susceptibility to cephalic pain in an individual. The method comprises typing in vivo or in a sample from the comparises typing in vivo or in a sample from the comparises typing in vivo or insulin receptor individual, the insulin receptor gene region or insulin receptor contains that is susceptible to caphalic pain. Polymorphisms in the insulin receptor gene that caphalic pain. Polymorphisms in the insulin receptor gene that any be diagnosed using a probe, primer or antibody which is capable of detecting an insulin receptor gene region or insulin receptor protein polymorphism. The method is useful for diagnosing susceptibility to migraine, cluster headache, chronic paroxysmal hemicrania, headache associated with vascular disorders, headache associated with substances or their withdrawal, tension headache, and so on. It is useful for assessing the efficacy of agents in relieving cephalic pain, and can be used to assess the ability of agents to modulate insulin receptor signalling activity. The method may also be used to assess correction and/or susceptibility of an individual to the development of diseases mediated by the insulin receptor and in the
                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosing susceptibility to cephalic pain such as migraine by typing insulin receptor gene or protein in vivo, or in a biological sample and determining individual's susceptibility to cephalic pain
    ů
              cephalic pain, particularly to migraine. The method comprises typing a region of the insulin receptor gene or insulin receptor protein of an individual. A susceptibility to cephalic pain may be diagnosed using a probe, primer or antibody which is capable of detecting a polymorphism in an insulin receptor gene region or the insulin receptor protein.
in the insulin receptor gene have been found to cause susceptibility

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             insulin receptor gene contribute to susceptibility to cephalic pain. The present sequence is complete sequence from exon 14 to 17 of human insulin receptor gene. SNP in this sequence contributes to susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the use of an agent that modulates directly or indirectly the insulin receptor or insulin receptor of signalling pathway in the manufacture of a medicament for preventing or treating pathway in Cephalic pain disorders are generally multifunctional disorder, with a cluster of headache, chronic paroxysmal hemicrania, headache associated with vascular disorders, headache associated with substances or their withdrawal (for example drug withdrawal), tension headache and in particular migraine with aura or migraine without aura. The treatment of cephalic pain and migraine pathways, in particular by manipulation of the insulin receptor. Insulin receptor is an important component in the regulation of the glucose and lipid metabolism pathways. Single nucleotide polymorphisms (SNP) in the
development of new drug therapies which selectively target one or more allelic variants of the insulin receptor gene.

ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted protein genes, and ABP00947-ABP01363 represent the proteins they encode. ABZ73698-ABZ73698 represent human secreted protein genemic fragments. The invention also encompasses antibodies specific for the secreted proteins in drug screening and recombinant the use of the secreted proteins in drug screening and recombinant covectors and host cells comprising a nucleic acid of the invention. The secreted proteins are thought to be involved in biological activities associated with cellular signalling, cellular differentiation, cell screening and neurotransmitter activity. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and encoding them, antibodies or antibody fragments specific for the secreted proteins and modulators of proteins activity are useful for diagnosing or treating cancers or other hyperproliferative disorders. Additionally, the secreted proteins and their nucleic acids may also be used in the treatment of autoimmune disorders, inflammatory disorders, diseases involving angiogenesis, ADS (acquired immunodeficiency syndrome), hepathtis, anaemia, and to promote wound healing. Nucleic acids of the invention may be used for chromosome definition and the secreted proteins and the secreted immunodeficiency syndromes in the invention and to promote the secreted proteins and the secreted immunodeficiency syndromes, the secreted promote the secreted proteins and the secreted immunodeficiency syndromes, the secreted promote the secreted secreted syndromes and the secreted syndromes and the secreted syndromes and the secreted syndromes and the secreted syndromes and the secreted syndromes and the secreted syndromes and the secreted syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes and syndromes 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                identification, chromosome mapping, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises the amino acid and coding sequences of human secreted proteins. The DNA and protein sequences of the invention are useful for the diagnosis and treatment of allergic disorders, asthmatic disorders and immediate hypersensitivity diseases (e.g. hay fever, allergic conjunctivities and allergic rhinitis). The proteins of the invention are also useful for identifying a binding partner. The nucleic acids of the invention are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The present DNA sequence.
allergic disorder; asthmatic disorder; gene therapy; secreted protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of human secreted proteins and nucleic acids for preparing a diagnostic or pharmaceutical composition for diagnosing or treating allergic or asthmatic disorders, e.g. asthma, hay fever, or allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

(HUMA-) HUMAN GENOME SCI INC. Rosen CA, Ruben SM; WPI,, 2003-040583/03.

New human secreted proteins encoded by genes contained in cDNA clones (e.g. HGCAC19), useful for preventing, treating or diagnosing e.g. ALDS, multiple sclerosis, herpes virus, leukemia, tick-borne encephalitis or west Nile fever

Disclosure; Page 2326-2330; 2423pp; English.

The invention relates to novel human genes (ABZ66891-ABZ68209) and the encoded secreted proteins (ABP99470-ABP99872) useful for preventing, treatment ameliocating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (anti-agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other and cuter of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung or unceprential; (b) immune discorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid architis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

                                              Direct Submission
Submitted (17-UIN-2002) Weisshaar B., Max-Planck-Institut fuer
Submitted (17-UIN-2002) Weisshaar B., Max-Planck-Institut fuer
Zuechtungsforschung, Carl-von-Linne-Weft border of the T-DNa. It
This sequence is recovered from the left border of the T-DNa. It
Indicates an insertion within the locus defined by clone f44:8. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:
http://www.mpiz-koelin.mpg.de/GABI-Kat/.

An Arabidopsis full-langth cDNA library was constructed essentially as reported previously (Seki et al., 1998).cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and Sali: This clone is in a modified pBluescript vector. Please visit our web eite (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further details.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1636
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Arabidopsis thaliana

This sequence is recovered from the left border of the T-DNA. It
indicates an insertion within the locus defined by clone F4H6. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat.project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:
http://www.mpiz-koeln.mgg.de/GABI-Kat/.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /clone_inb="Arabidopsis thaliana T-DNA insertion lines"
/note="PCR was performed on DNA from Arabidopsis thaliana
plants (TI) which were transformed with the T-DNA from
vector pAC16. The lines contain one or more T-DNA
insertions. The DNA fragment(s) resulting from the PCR
were directly sequenced to determine the genomic sequence
flanking the insertion. Sequences displaying significant
similarity to the A. thalaina nuclear genome sequence
processed for submission. T-DNA derived sequences were
                                                                                                                                                                                                                                                                     ..

The sequence contained an oligo-dT track that was present in the
Cligonuclectide that was used to prime the synthesis of first
stand CDNA and therefore this may represent a bonafide poly. A
tals. The sequence contained any represent a bonafide poly. A
tals. The sequence track served to verify it as a clone from the
non-normalized embryc at gestational day 14 library CDNA Library
Preparation: RW Woods, UA Green, RS Prather 142 Animal Science

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                          1 ggttaagcgttttacttatg......tttctctctagctatattta 1677

```
APPLICANT: KEENE, JACK D.
APPLICANT: KING, PETER H.
APPLICANT: LEVINE, TODD
TITLE OF INVENTION: METHODS AND COMPOSITIONS USEFUL IN THE
TITLE OF INVENTION: RECOGNITION, BINDING AND EXPRESSION OF RIBONUCLEIC ACIDS
TITLE OF INVENTION: INVOLVED IN CELL GROWTH, NEOPLASIA AND IMMUNOREGULATION
TITLE OF INVENTION: DAN C.
TITLE OF INVENTION: DAN SEQUENCES FOR STRAIN ANALYSIS IN MYCOBACTERIUM
FILE PEPERENCE: 24366-20007 00
                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
